

ASA Evidence Release 002

EXECUTED: 2026-08-12 / PROTOCOL 1.0.1 / PASS 8 OF 8

Research question

Does the current ASA-integrated prototype behave deterministically and preserve its evidence boundaries?

Gate	Observed behavior
G01	Deterministic record identity
G02-G03	Evidence and temporal abstention
G04	Bounded evidence references
G05	Private ASA Core V2 invoked
G06	No unsupported probability
G07	Five-year horizon enforced
G08	Invented reference rejected

Verdict

ASA operates as a real, bounded and auditable local system.

This verifies operational integrity - not predictive advantage, calibration, production readiness or general scientific validity.

Integrity record
